Title: Accidental Release Information Program, EPA ICR #1331.06. This ICR requests renewal of a currently approved collection (OMB #2050-0065).

Abstract: The Accidental Release Information Program (ARIP) collects data on the causes of chemical accidents and points to steps that could be taken by industrial facilities to prevent accidental releases. In this collection, refined ARIP criteria are used to obtain data on unique chemical accidents that pose a direct hazard to the public and the environment. It will survey only those releases that involve injury and death to members of the general public and cause off-site consequences, such as evacuation, sheltering in place, or environmental damage. Fixed facilities responsible for the selected release are required to complete and return a questionnaire which asks for more detailed information on the causes and consequences of the accidental release, and the release prevention practices and technologies in place prior to and following the accident.

The collected information will serve to support a range of chemical accident prevention and preparedness efforts involving industry, local and state governments, as well as EPA regions and headquarters.

Burden Statement: Public reporting burden for this collection of information is estimated to average 25 hours per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the collection of information. There is no recordkeeping burden.

Respondents: Owners/operators of fixed facilities with accidental releases meeting selection criteria.

Estimated No. of Respondents: 125.

Estimated Total Annual Burden on Respondents: 2,513 hours.

Frequency of Collection: On occasion, when releases meet specific triggers.

Send comments regarding the burden estimate, or any other aspect of this information collection, including suggestions for reducing the burden, (please refer to EPA ICR #1331.06, and OMB #2050-0065) to:
